

A Novel, Mobile-phone, EMR-based Application To Improve Workflow For Standardized Clinical Photography

Michael Golinko MD, FACS, FAAP

Department of Plastic Surgery, Vanderbilt University Medical Center

Photo App Workflow

Epic Haiku is opened during the clinical encounter on the providers iPhone to acquire and upload the photo in the patients chart

Dynamic overlays toggle from red to green when the face is in correct orientation & alignment

Purpose & Methods

- Lack of easy, intuitive **standardized** clinical facial photography
- Lack of seamless way to get a standardized photo with consistent background into the patients EMR for clinical decision making & documentation
- Partnership with Heath IT to develop a pilot app in Epic Haiku

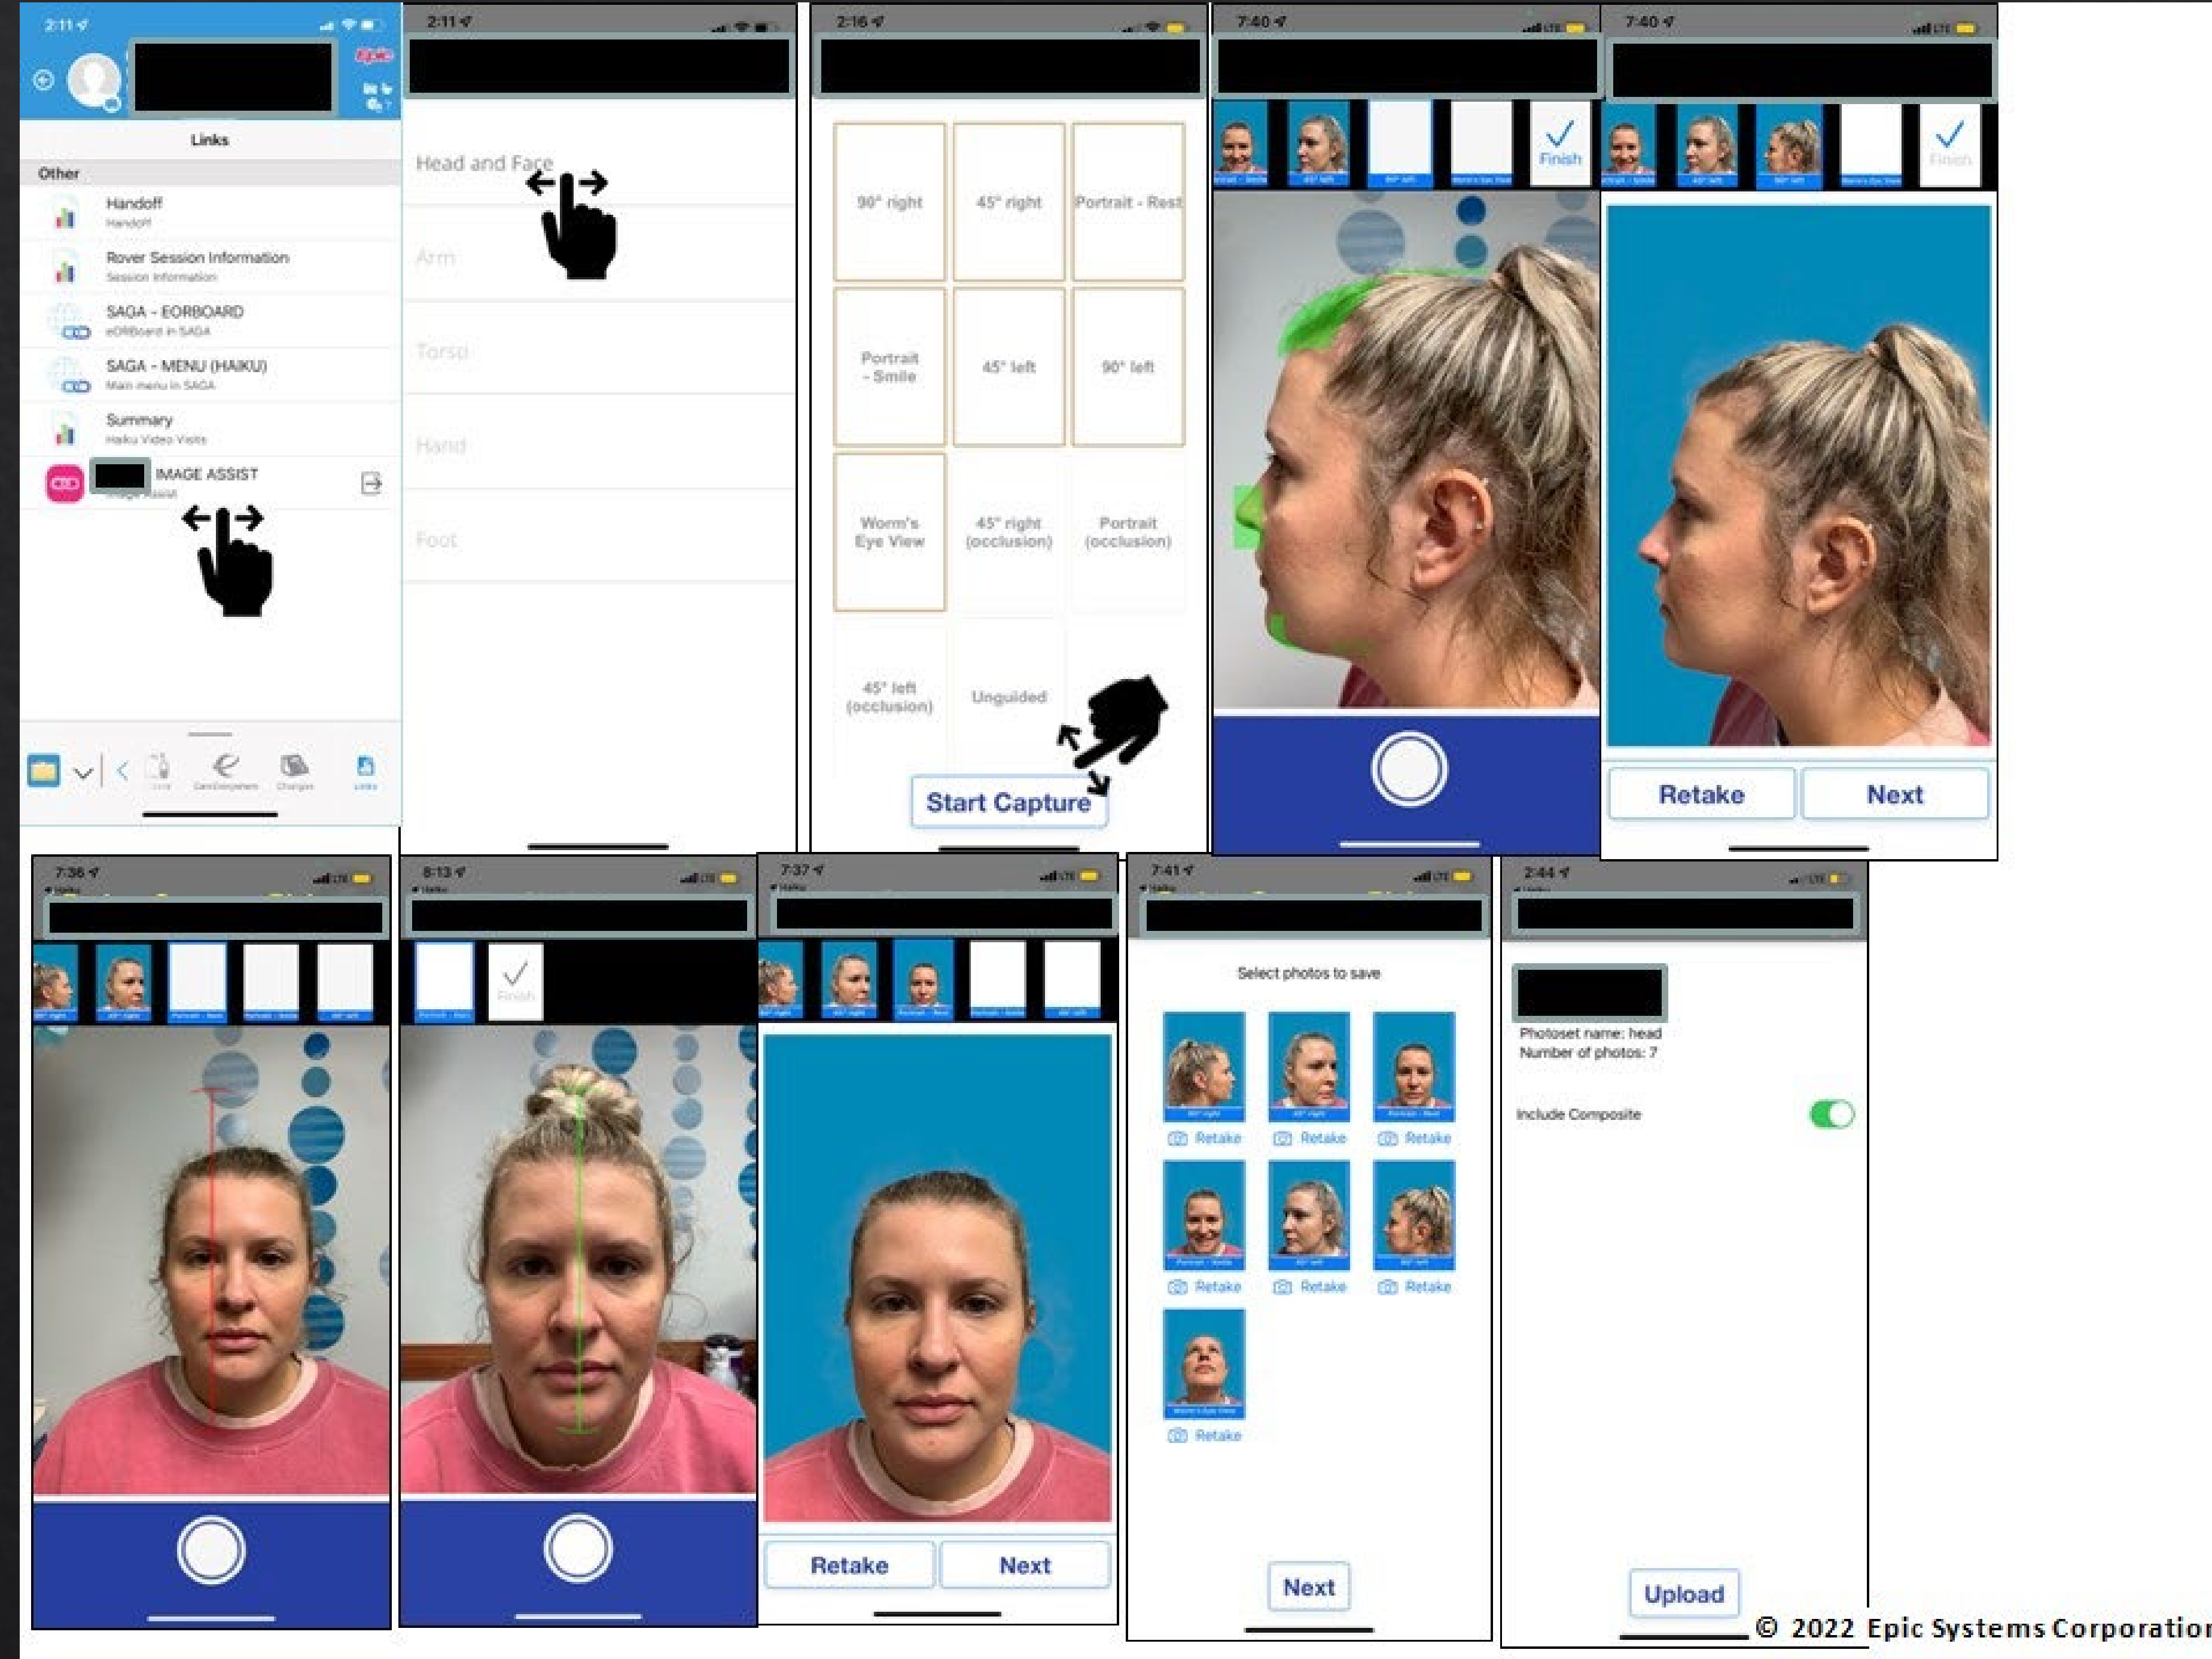

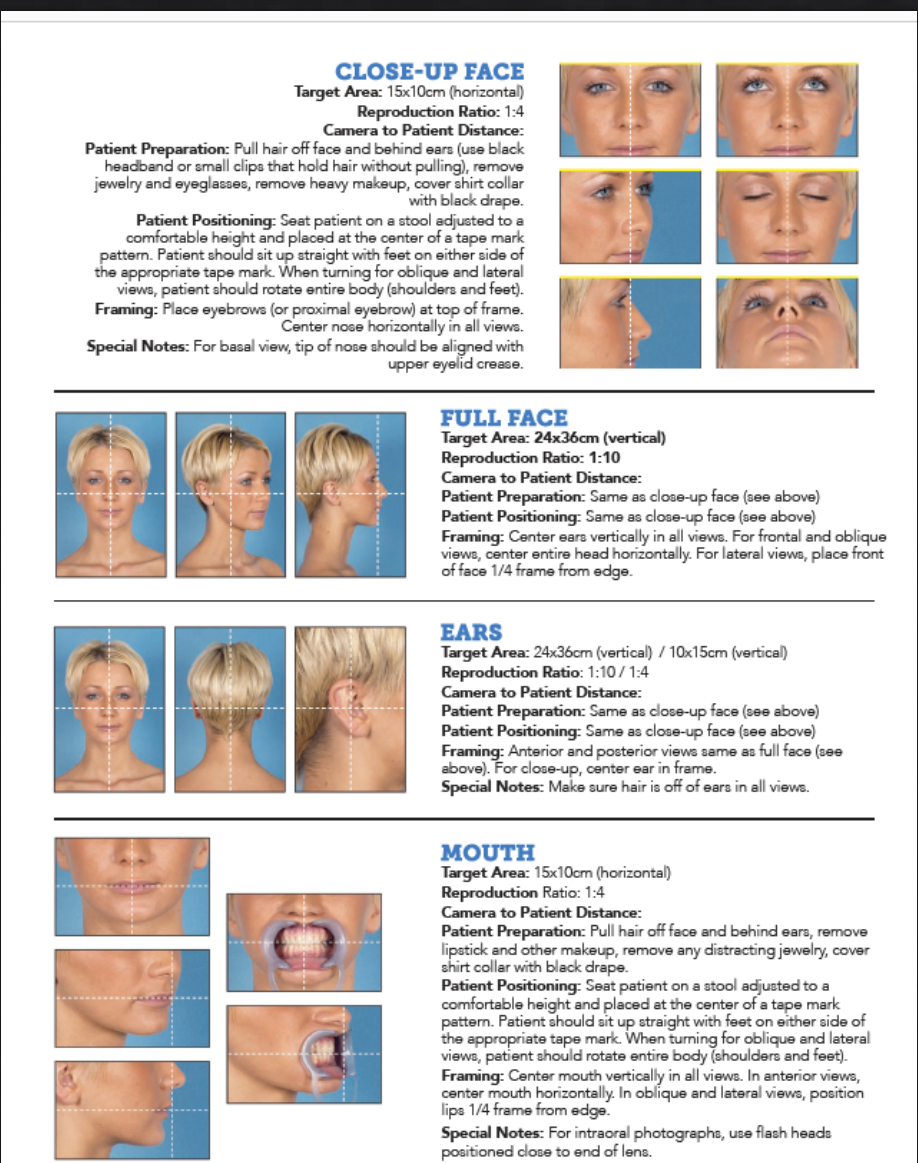

ASPS
Photographic
standards

Concept of
mobile check
deposit to facial
recognition

Epic Haiku
Mobile App

Current Data & Future Steps

Pilot version data from 8/2021

Total active users= 17

Total photos/patient encounters = 2312/587

Future Features: Zoom/ flash/ tilt control

Expansion to Body & extremity photo standardization

Intrigued ?
