

INTRODUCTION

In Taiwan, part of addictive anesthetic, psychotropic medications and several kinds of drugs that were considered necessary to strengthen management by “Act of the Administration of Controlled Drugs” and “Medical Quality and Patient Safety Work Goals“, that were promulgated by government agency to control the safety of Controlled Drugs using over the years.

Articles 12 and 19 of the “Physician Act” and Articles 6 in “Act of the Administration of Controlled Drugs” clearly record that doctors must have a legitimate purpose of treatment before prescribing controlled drugs, and the chief complaint must be stated when prescribing , diagnosis or disease name, treatment, treatment or medication, and other necessary information. Therefore, in order to understand the medical necessity of controlled drugs, our hospital established an interdisciplinary team to analyze and improve the clinical note of controlled drugs.

METHOD

Randomly select outpatient controlled drugs records for whole week every quarter, and random sampling at most three clinical note from each doctor, and use the Likert Scale to score the detail in clinical note that mentioned the condition to use the controlled drugs, and through the Student's t-test to conduct drill-down analysis by physician, department, and drug types.

FINDINGS AND DISCUSSION

"Medical Necessity"refers to the avoidance of medical waste, excessive medical treatment, and ineffective medical treatment. Although the actual record and content of the clinical note may vary depending on the individual doctor. After several interventions by interdisciplinary team, there is a significant improvement in the scoring results of physicians and departments. In order to achieve the purpose of avoiding medical waste and excessive medical treatment.
