

HEALTH INNOVATION SERIES

Evidence based recommendations to optimise electronic medication systems

Raban MZ, Clay C, Merchant A, Fitzpatrick E, Westbrook JI

Did you know that electronic medication systems require regular monitoring and improvement to identify and resolve patient safety issues and reduce error?

Access & subscribe

The Health Innovation Series (HIS) provides practical recommendations for digital system improvement based on research evidence in an easy-to-read, easy-to-apply format.

Recommendations are drawn from research across **72,000** orders and more than **3,000** errors

New errors and
issues **targeted**
monthly and
tips delivered to
your inbox

Join the people in **84**
countries
who already use the
HIS to make care
safer

Clinicians, nurses, pharmacists,
hospitals & system developers rely on
the HIS to **identify updates**
and **avoid danger**

Research underpinning the HIS has
been **published** in prestige journals
and **presented** at international
conferences

This is what HIS subscribers say...

Expert, informative, **focused on safety.**
- Medical advisor

Up to date, **evidence-based** and very practical. Good examples for teaching.
- Professor Patient Safety

Valuable reminders about **how to build** our electronic systems in a way to **reduce errors**. -eMeds Pharmacist

We use it as part of our **national accreditation committee** and other work. - Quality Manager

Summary of problem

Issue that has been encountered by users or system managers
