

Postnatal Evaluation of the Spectrum of Cerebellar Anomalies: the PESCA study

Maria Giulia Ferrante, Sofia Ceffa, Sara Sorrenti, Francesca Felici, Anastasija Arechvo, Julia Binder, Carolina Scala, Federico Prefumo, Claudiana Olivieri, Matia Martucci, Gregor Kasprian, Domenico Romeo, Francesca Serrao, Andrea Rossi, Luca Ramenghi, TullioGhi, Paolo Volpe, Baskaran Thilaganathan and Alessandra Familiari

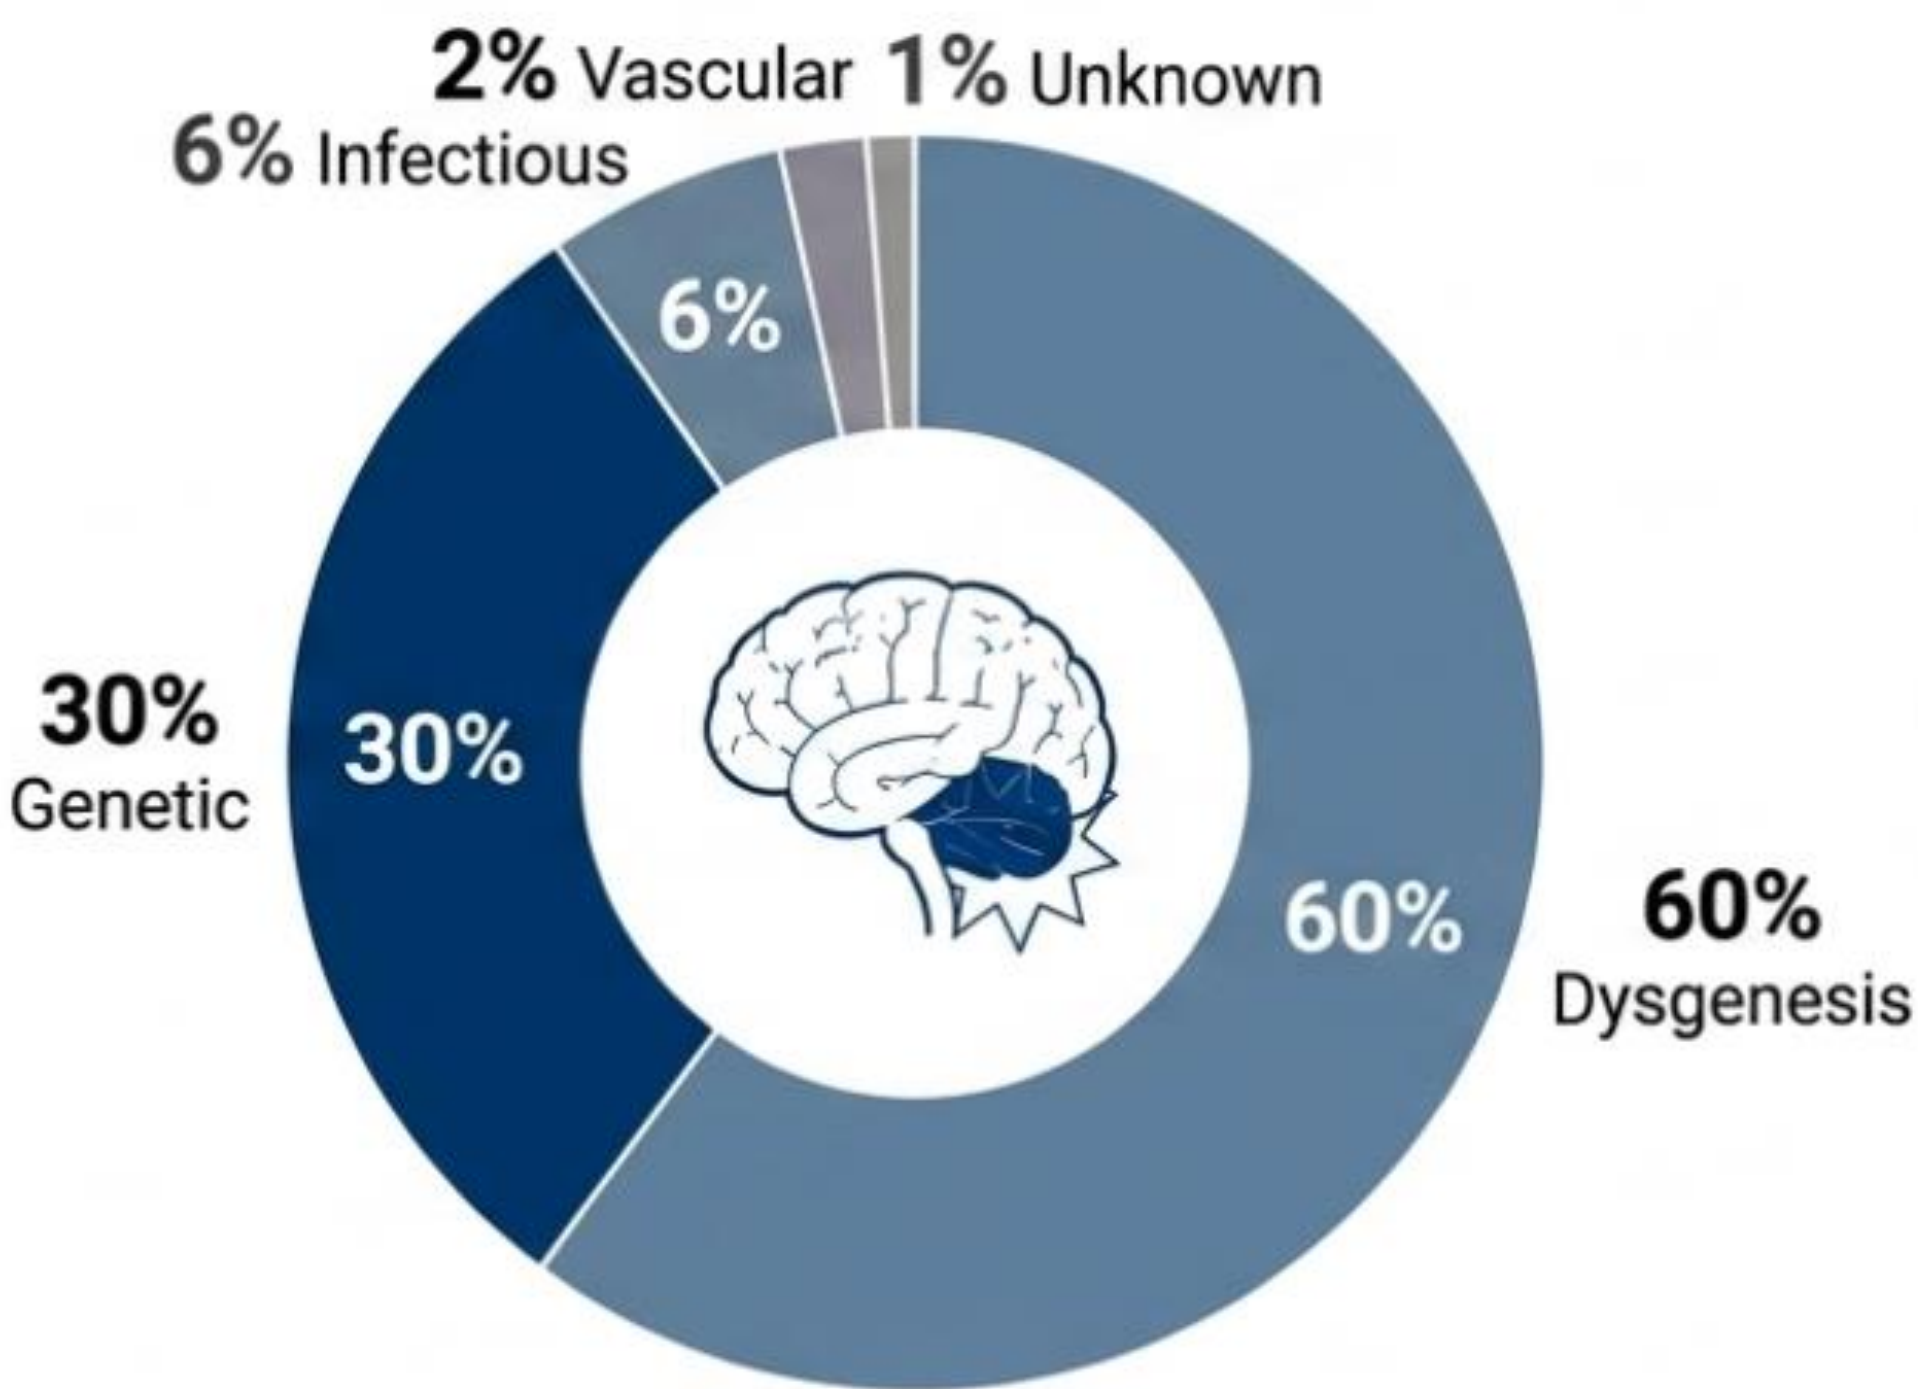

The study aims to evaluate neurodevelopmental outcomes of posterior fossa anomalies classified according to the PESCA framework, based on anatomical landmarks

Study Design Matrix

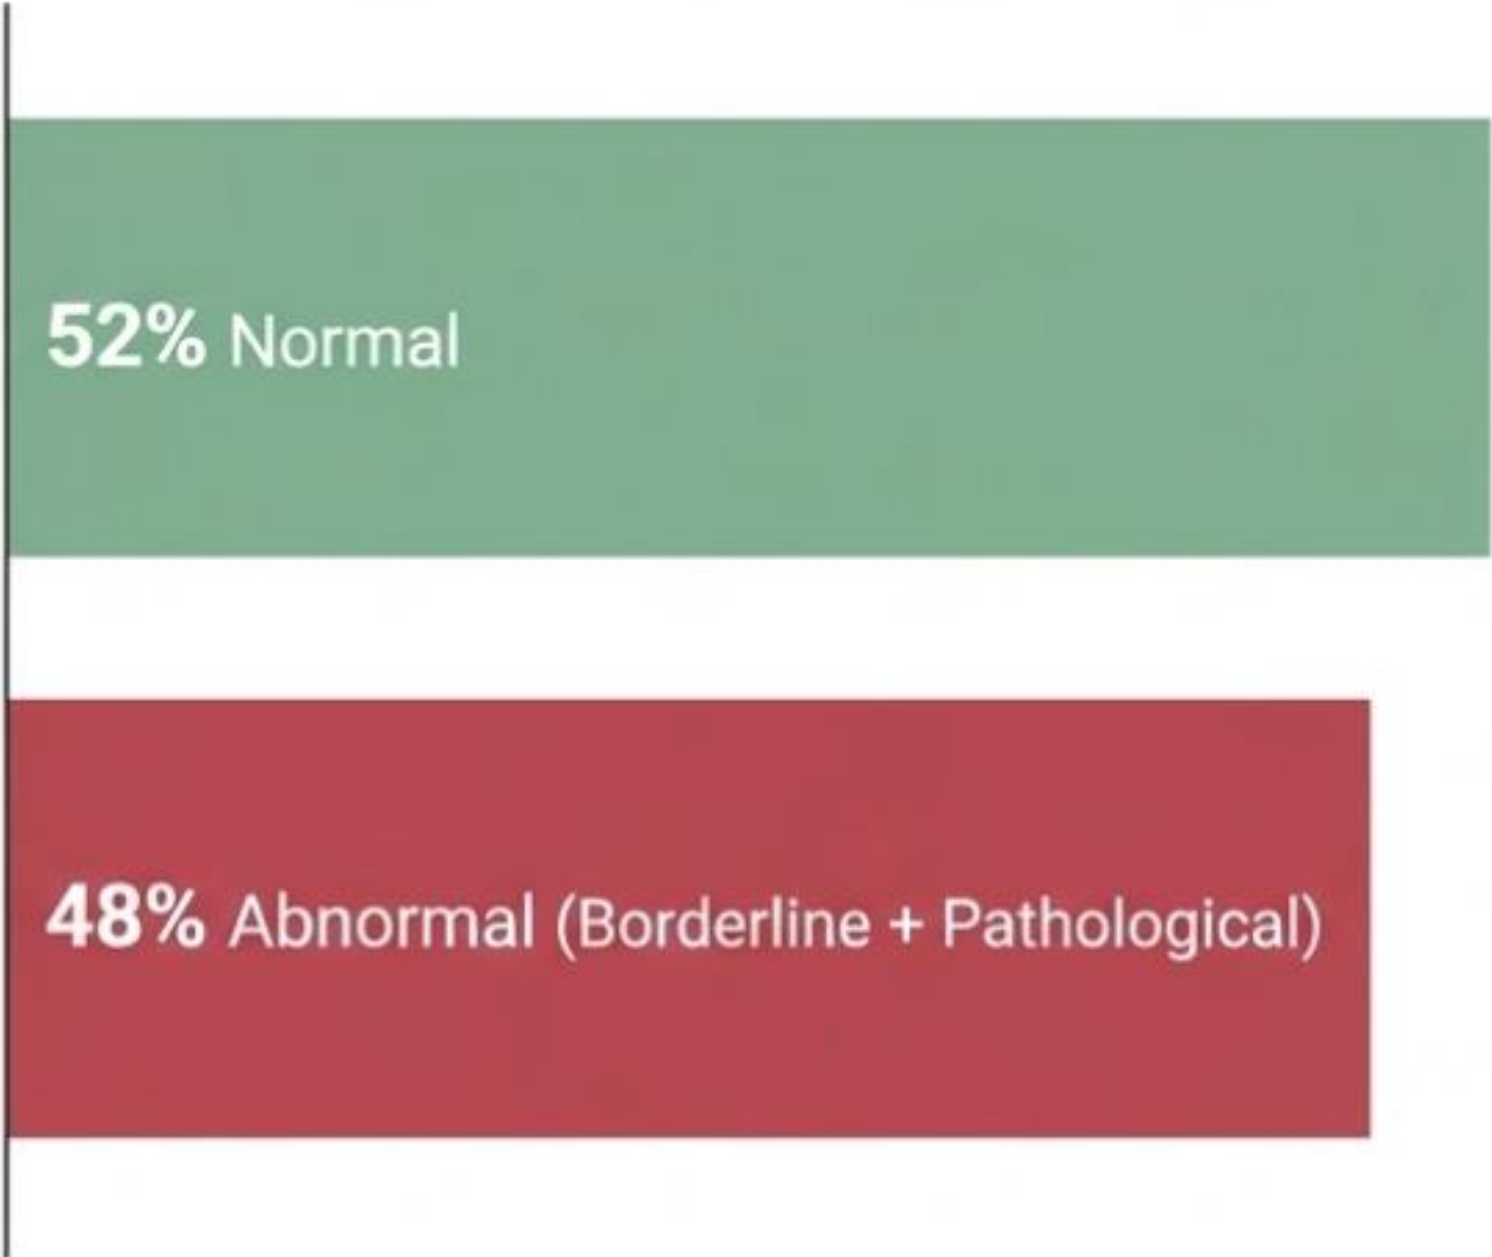

Inclusion:	Fetal PFA diagnosed by US $\pm$ MRI
Classification:	PESCA 4-axis anatomical framework
Outcomes:	Pregnancy + neurodevelopmental follow-up (Bayley, Griffiths, Vineland, parental interview)
Timeline:	January 2018 – November 2025 across 6 international centres.

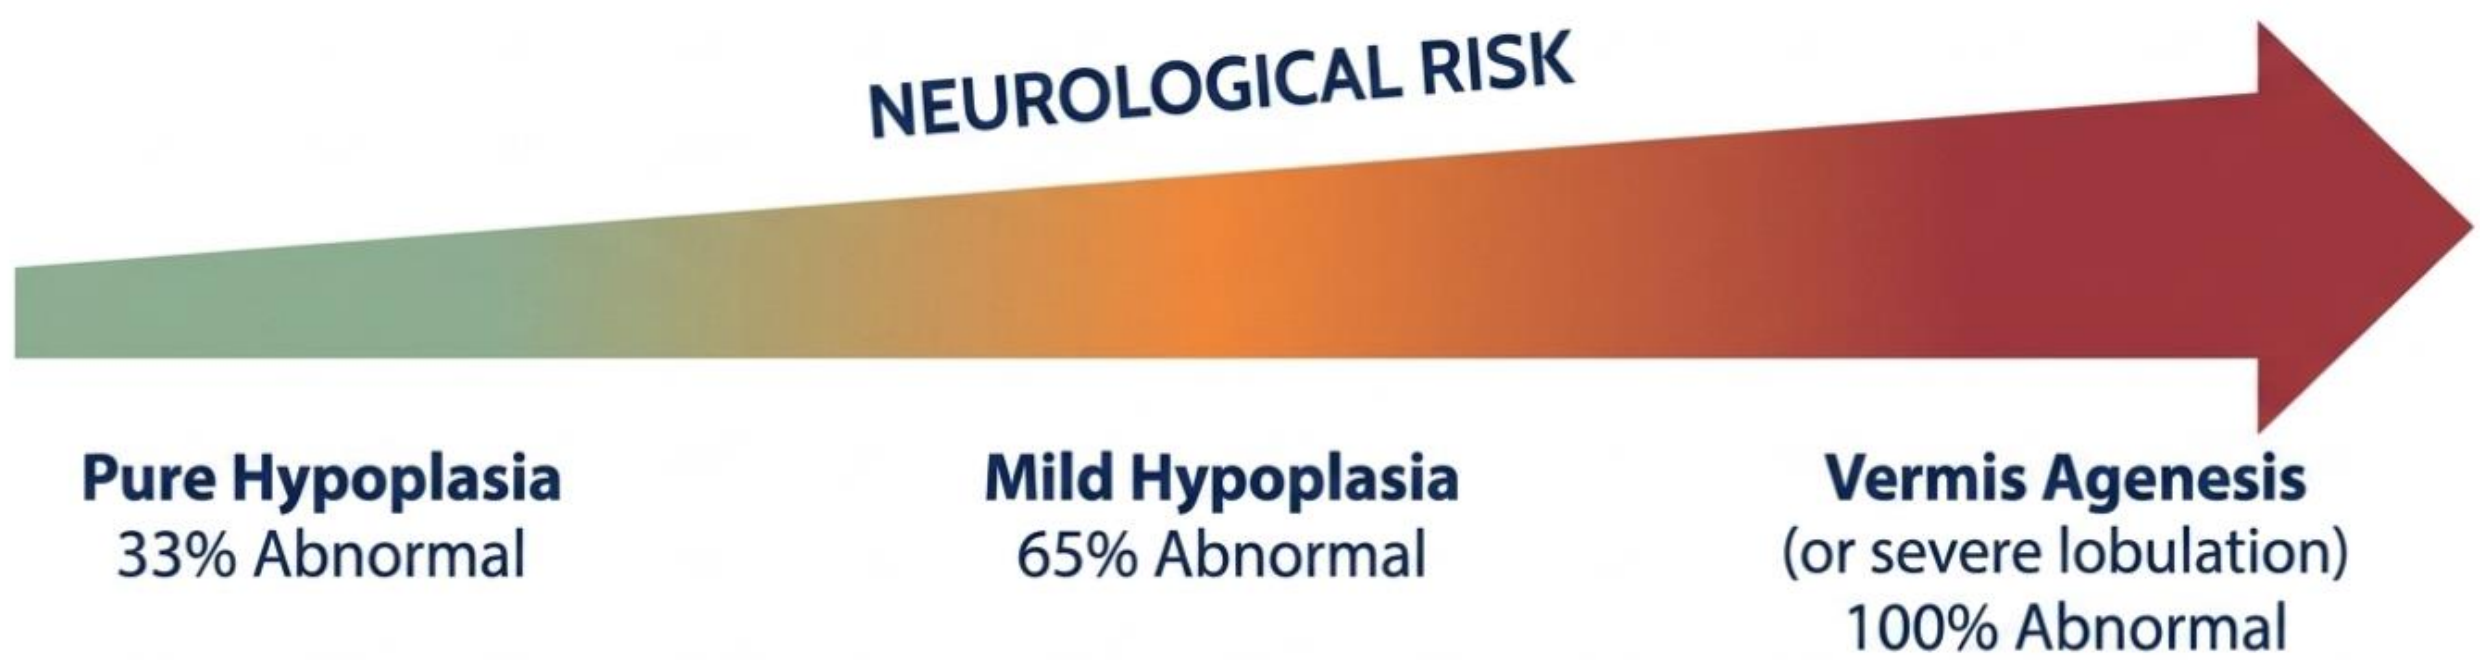

Aetiopathogenesis

Follow-up Outcomes (N=71)

Vermis biometry:

Predictors of abnormal neurodevelopment:
