

Audit of Impact of COVID-19 Medical Education:

Dr Laya Hariharan, Ms Ram Mohan, Ms Gupta, Milton Keynes University Hospital, UK

Objectives:

The aim was to find out the impact of the COVID pandemic on medical education.

Design and Methods:

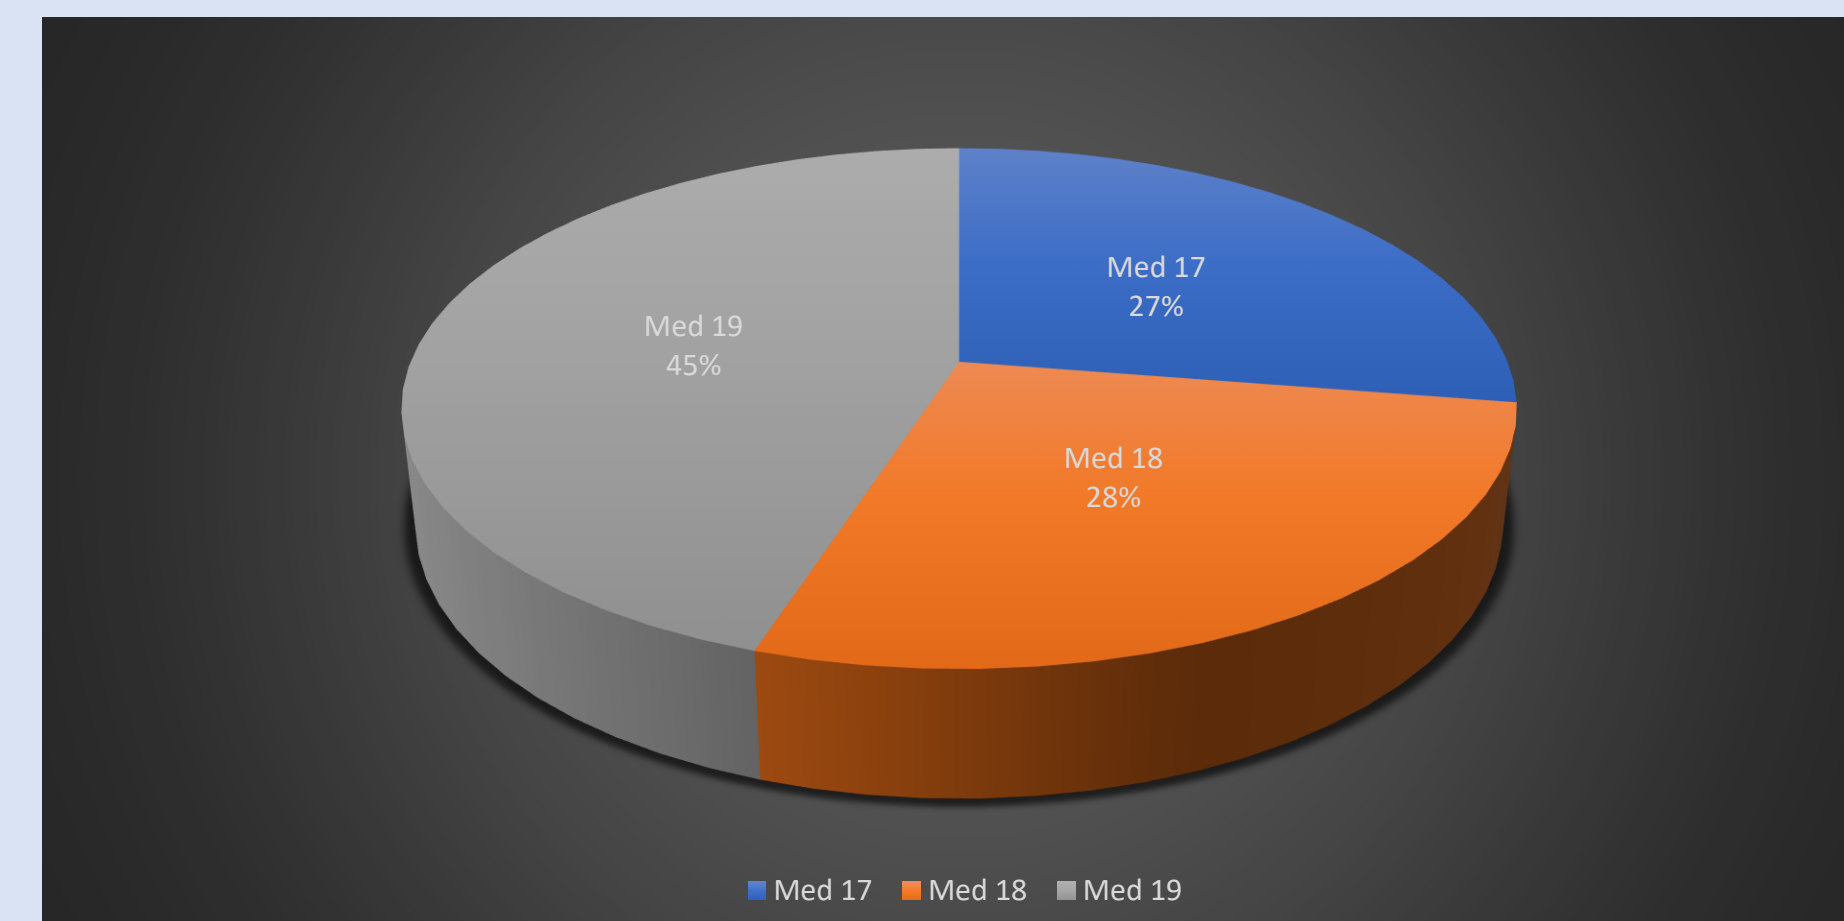

- We conducted a survey of all undergraduate medical students at Buckingham Medical school
- Questions were sent through survey monkey
- Reminders were sent twice
- 40 responses were collected over a 3-week time period
- The survey was sent out to 3-year groups and results were analysed

Conclusion:

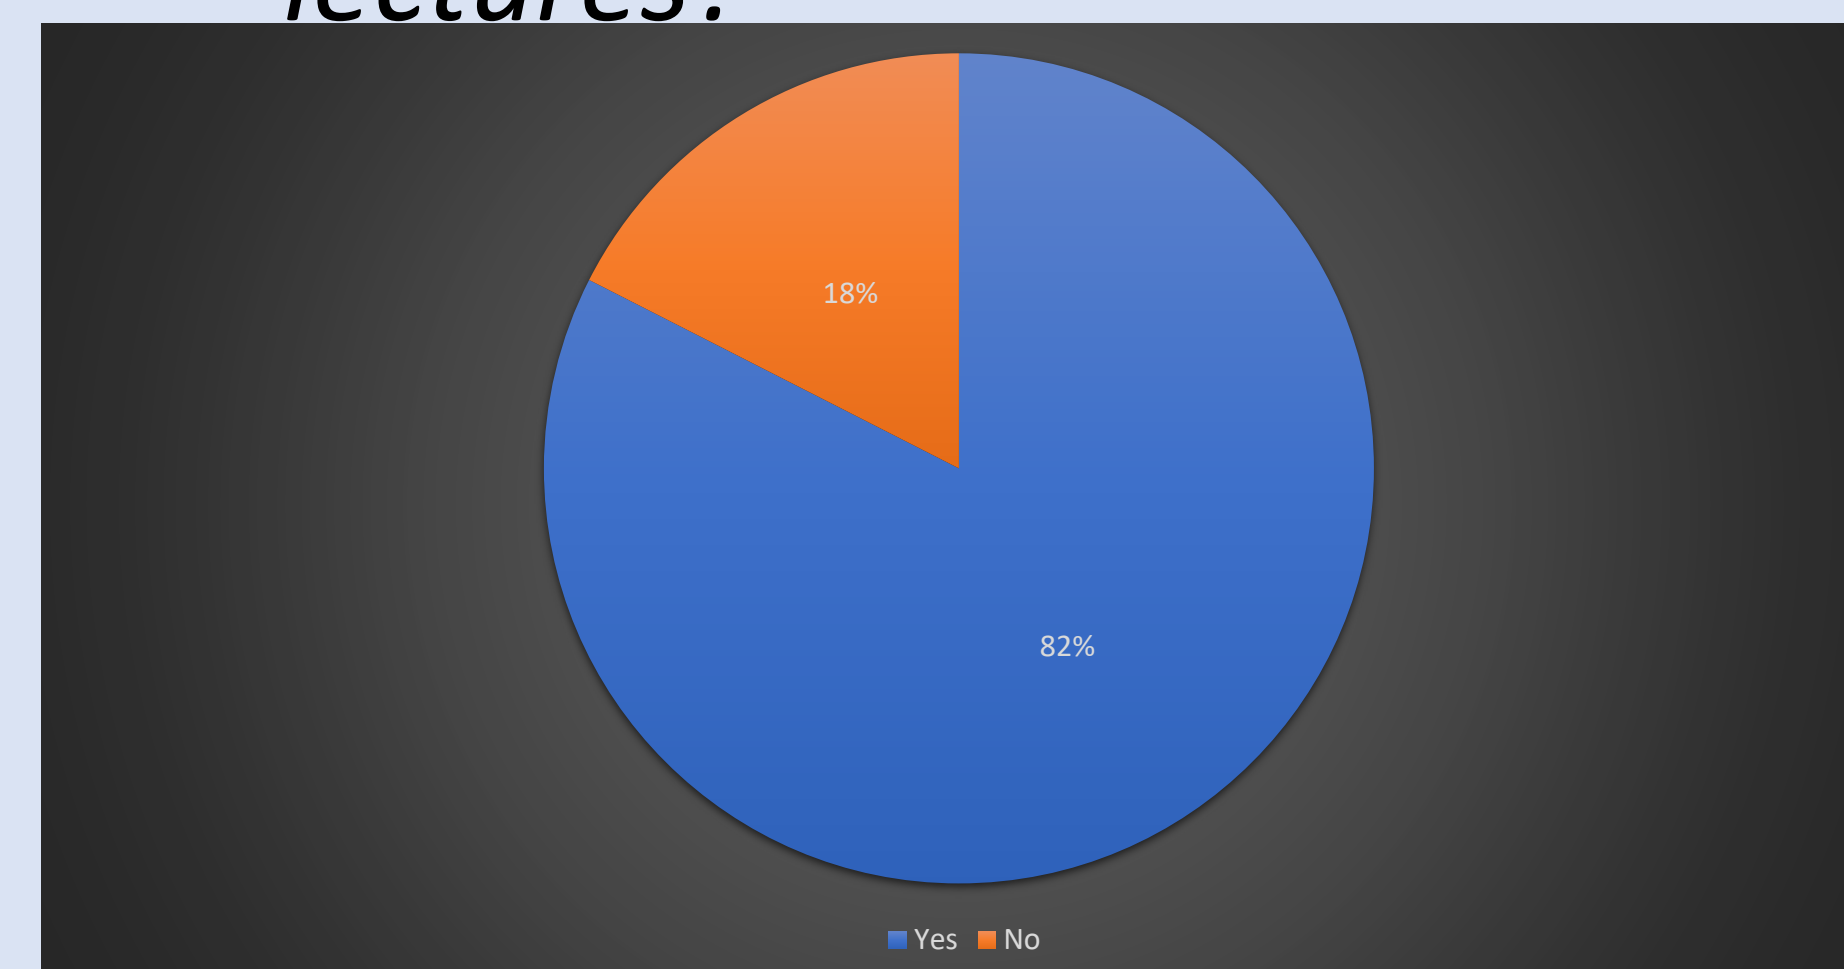

- COVID-19 had a huge impact on medical education
- This survey showed that other means of education like online recorded, live lectures and simulation are effective alternatives to face to face teaching
- These means of teaching can be used in future for medical education

Results:

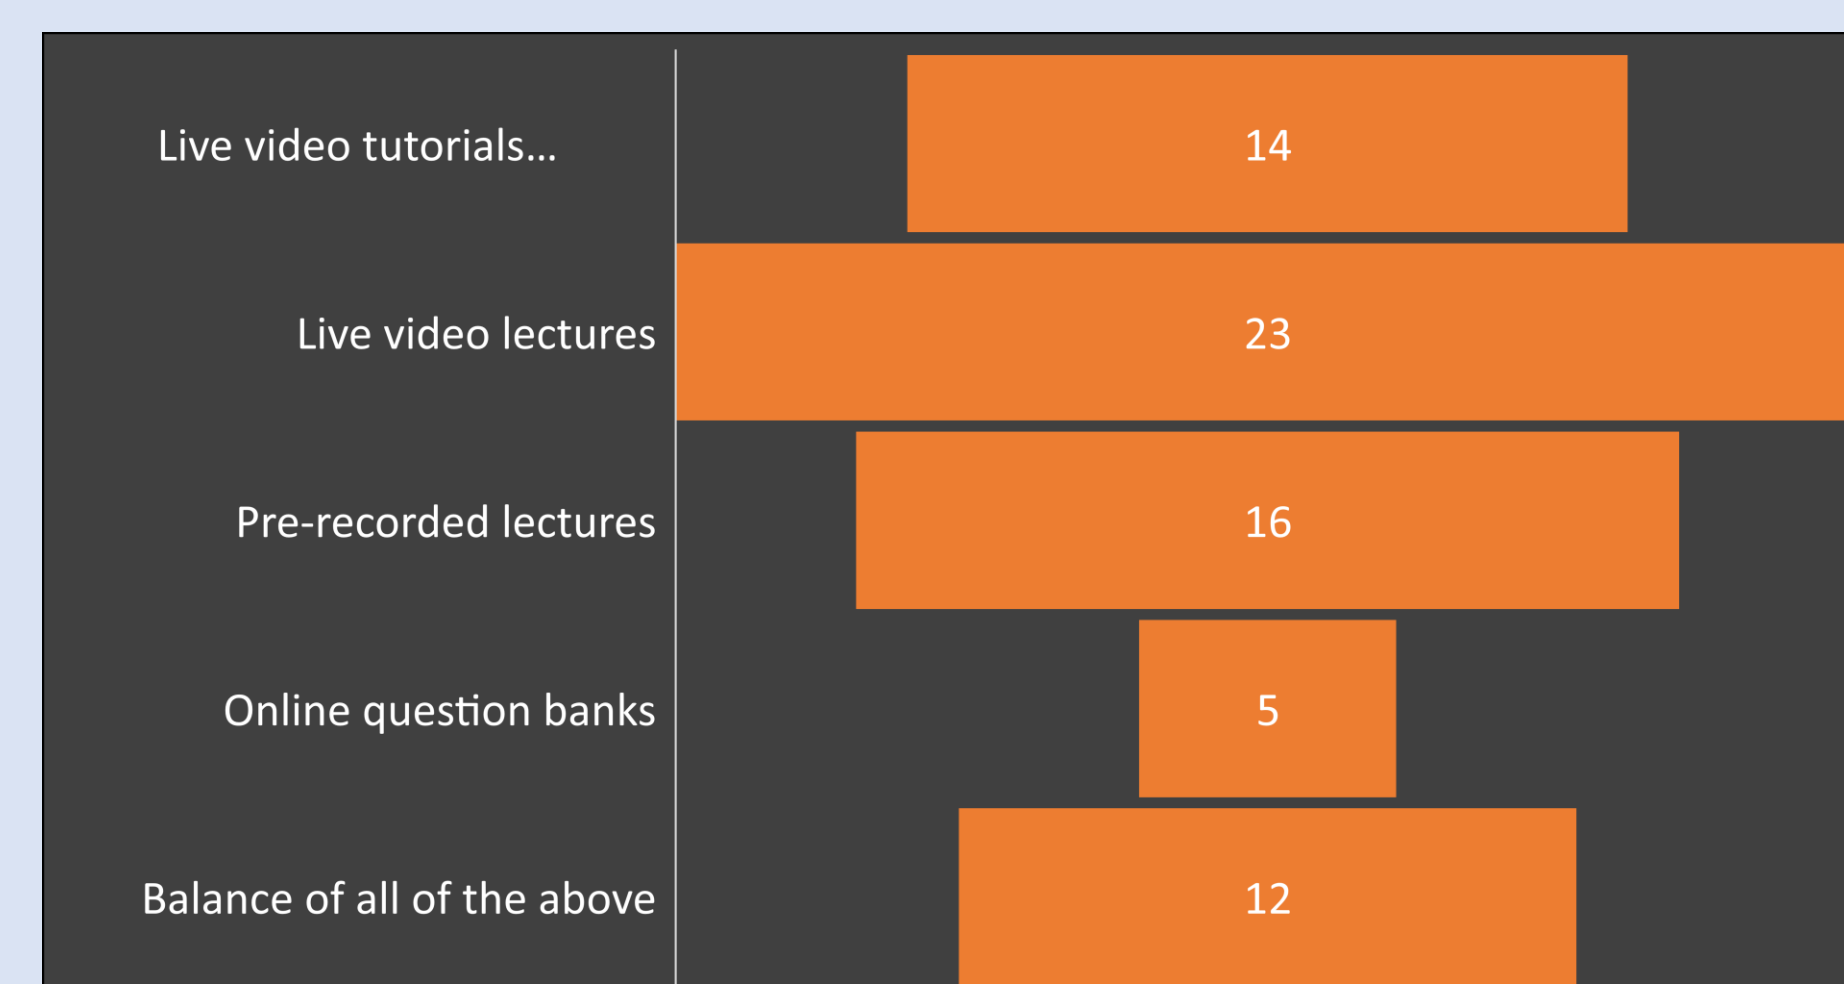

Which Cohort are you in?

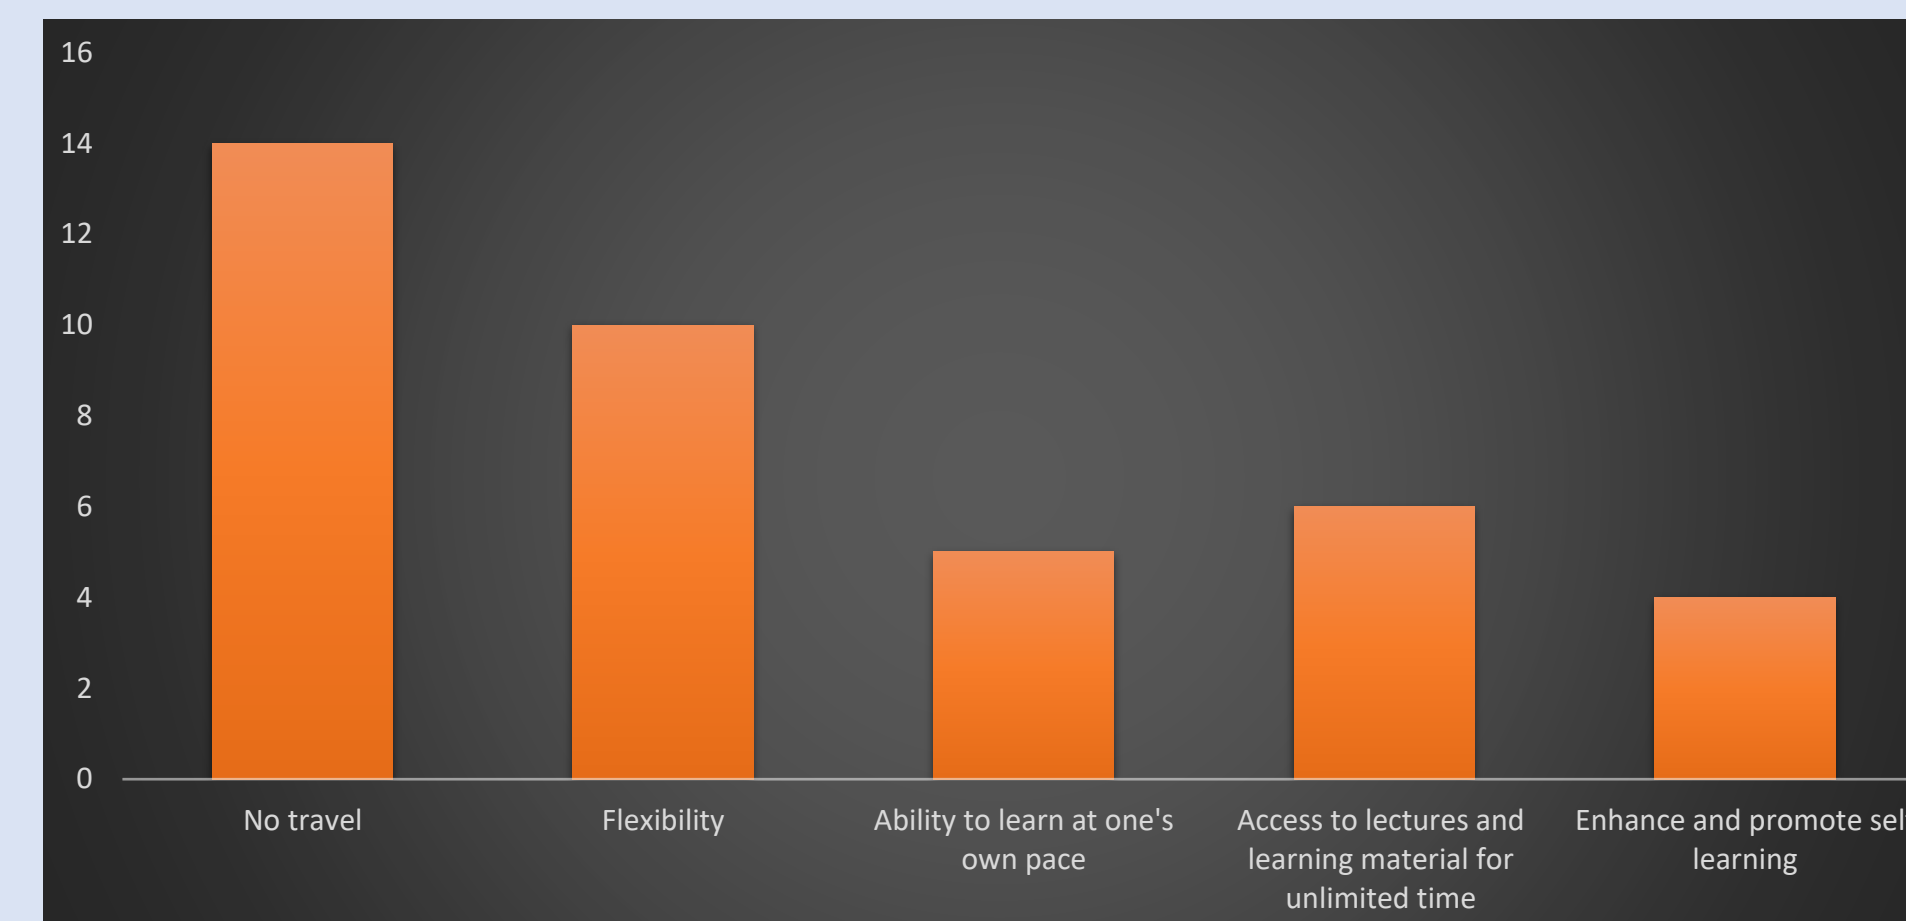

Do you have sufficient equipment and facilities to participate in online lectures?

What type of teaching did you predominantly receive?

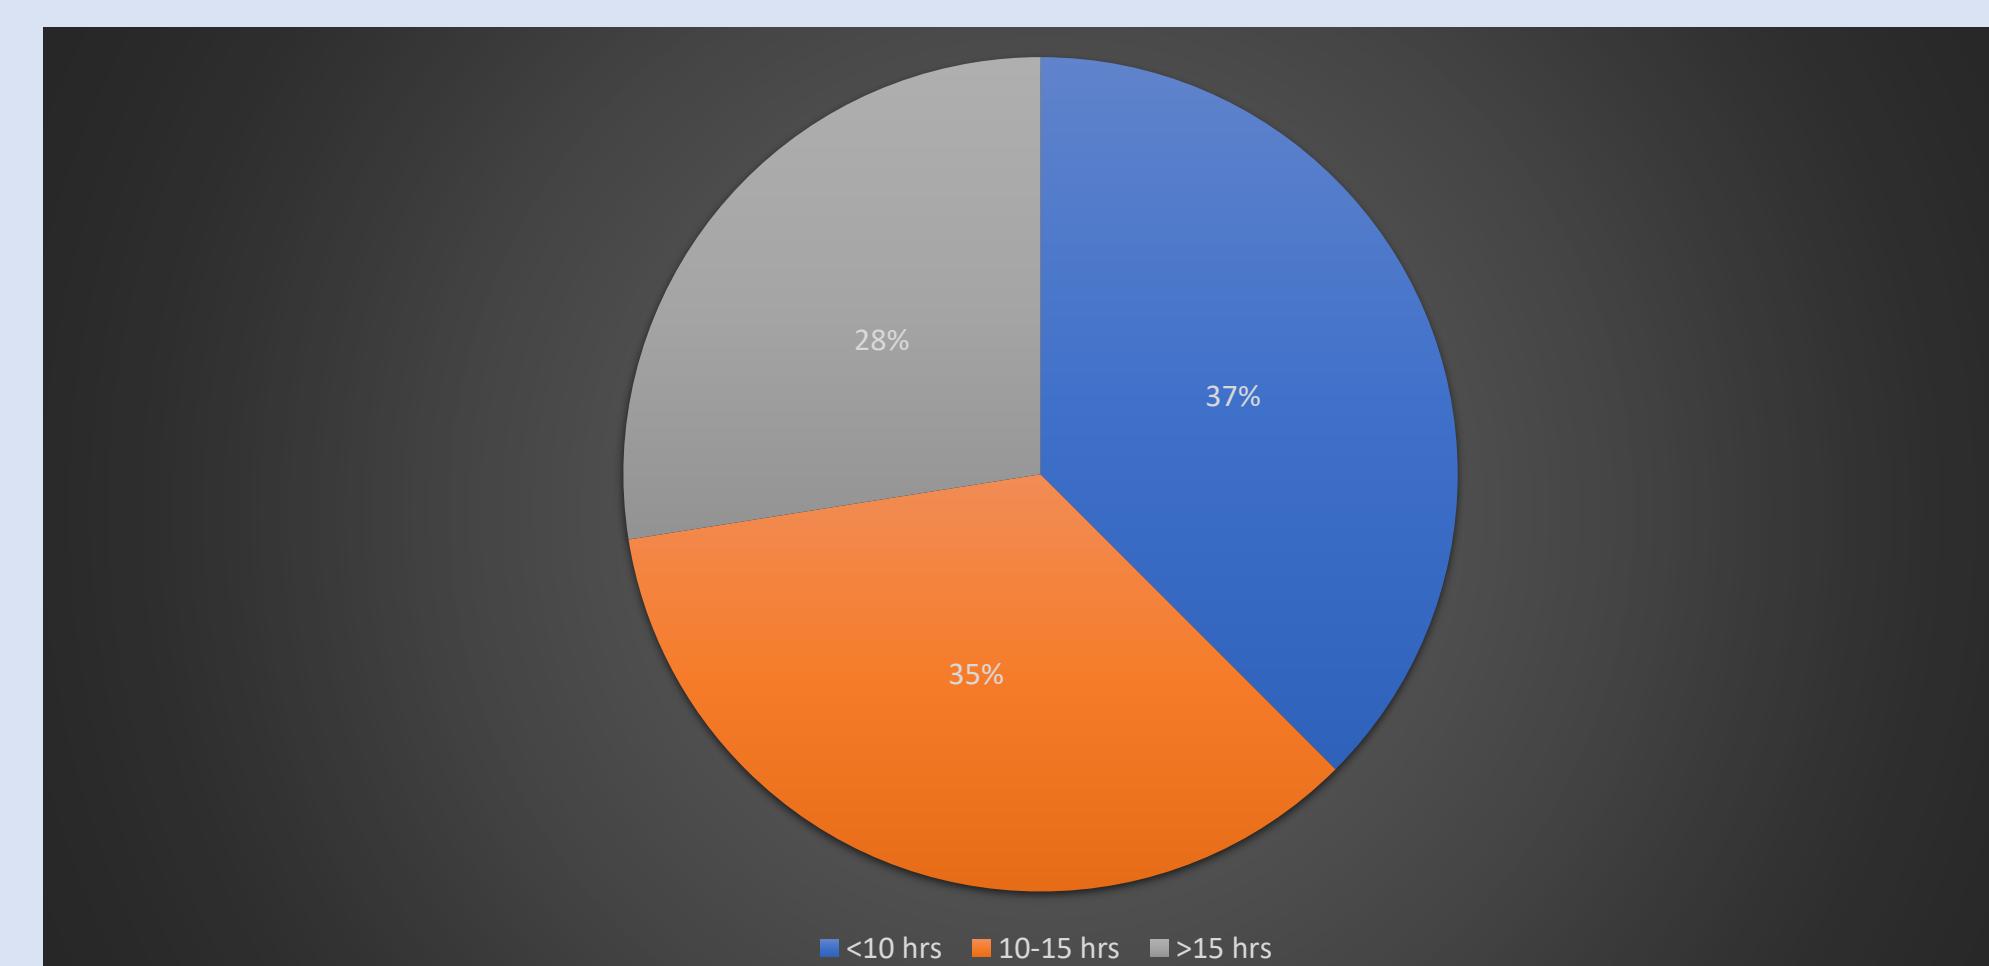

What do you feel is the main advantage of online learning?

What do you feel is the main disadvantage of online learning?

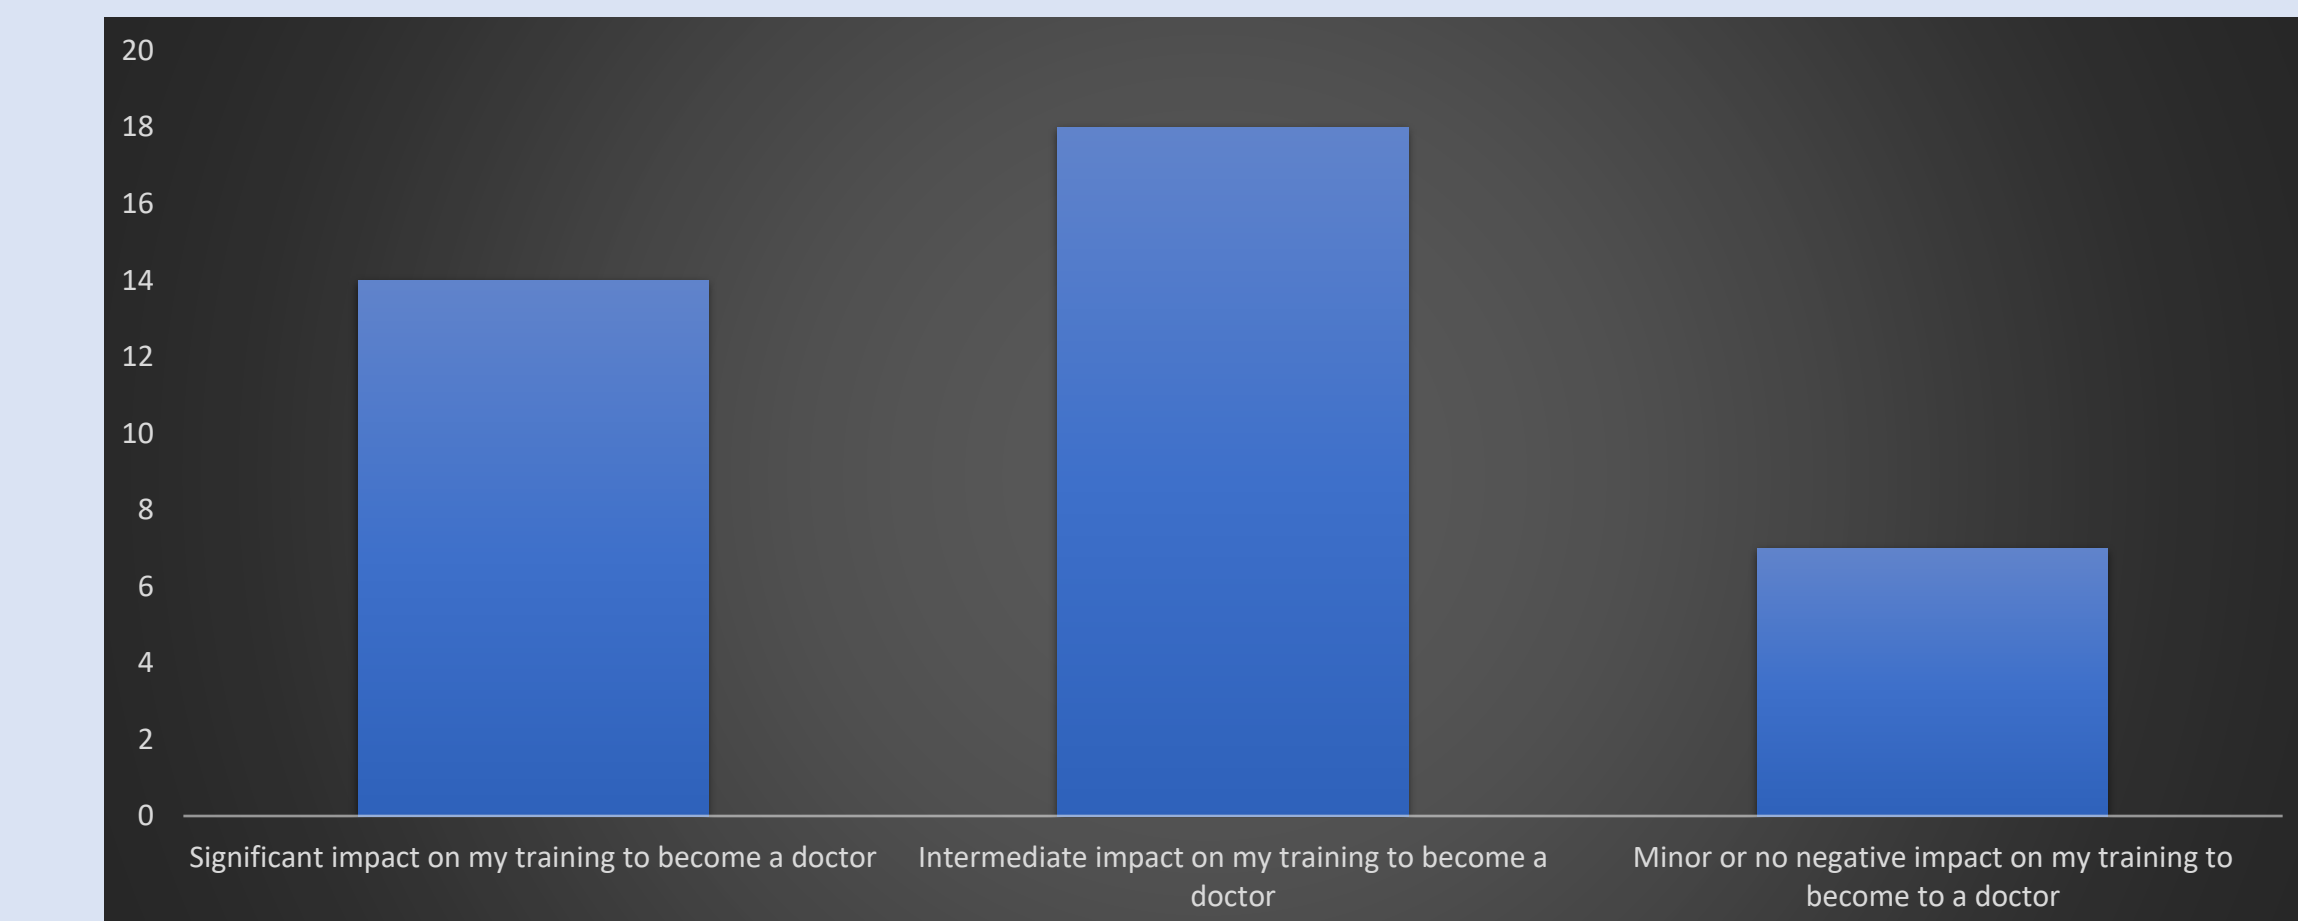

How many hours do you spend on online learning?

Has the reduction of face-to-face learning had:

How would you describe the adequacy of online learning, in terms of facilitating your training to become doctors?

Would you prefer online lectures compared to conventional lectures after the COVID-19 pandemic is over?
